

**Introducing the Q-Wave Pulse is a revolutionary new, drug-free, therapeutic product for treating chronic pain and much more invented by Garth Holding**

**Our vision is to empower people in managing chronic pain; to assist people in fully participating in life through an affordable, natural health care solution.**

### **WHAT IS FREQUENCY HEALING?**

Frequency healing is considered energy medicine which heals, maintains and organizes vital living systems. Such energies can stimulate the repair of tissues and enable built-in-healing mechanisms to operate more effectively. These frequencies can treat nerve, chronic pain and many other conditions using specific frequencies.

### **HOW DOES IT WORK**

The Q-Wave Pulse™ healing disc is based on the science of energy healing medicine. The device releases electronic pulses in the form of ultra low frequency waves that penetrate deep into tissue, cells, muscle and joints to relieve pain. These waves stimulate the damaged area and increase blood flow to revitalize and enable the body to heal efficiently. More importantly, this process corrects the underlying problem.

In order to heal damaged or injured areas you need to heal the associated tissue. That is why our device is very unlike the TENS unit or other such devices which only deliver a light electrical current to the skin to disrupt the pain cycle temporarily.

Our healing disc treats and heals areas based on different levels of frequencies that correct and correspond to different injuries. Every part of our body generates and radiates energy at certain frequencies. By utilizing ultra-low frequency waves in the form of electronic pulses pre-set from 3Hz to 11Hz this technology can help heal by as much as 80%. The compact disc-shape electronic micro chip device with rechargeable lithium battery technology can be placed on or over the injured area to begin the healing process.

The science of frequencies used to help heal the body has been around for years and since ancient times. It can be found in similar products like Ultrasound and deep medical therapy products. The problem with most of these products is that they are only available to the patient in medical settings like hospitals, and therapy clinics. There is a great demand for a compact device that can heal and relieve pain without the complexities of appointments and complicated medical devices. What each person needs is the freedom and flexibility to get pain relief when they need it. The **Q-Wave Pulse™** can be used anywhere and at any time giving the person control over pain and help promote positive healing.

I tried hundreds of treatment options over the past ten years but nothing worked except the **Q-Wave Pulse™**. Other therapies only masked the problem, caused more damage or other side effects. Products like TENS caused

burning or increased pain to my injured areas and nerve damage. The **Q-Wave Pulse™** directed the treatment to the injury without any discomfort. Like our motto says

“It doesn’t have to hurt to heal”.

The **Q-Wave Pulse™** is small and lightweight which allows the individual to help heal themselves. Healing is directed to the injury or pain area with one or a few of the **Q-Wave Pulse™** healing discs. No wires or pads are needed like the TENS machines, or gels and creams from Ultrasound guns. It’s just a circular disc about the size of a watch face, and an on board patented computer and lithium ion batteries that supply the power to the computer. It can be placed on any area of the body with the assistance of a circular adhesive patch or Velcro sport strap when needed. It runs for a **20-minute treatment cycle**.

“I needed a better solution” says Garth. This was very important to him after recovering from numerous surgeries. It gave him the opportunity to heal and control his pain without the high priced medications or complicated devices that do more harm than good.

After completing years of research in hospitals, medical centres, rehab clinics and speaking with medical professionals, I discovered that nothing like the Q-Wave Pulse™ existed. All my specialists expressed interest in my product that could help heal and control pain.

## **THE INVENTOR**

Garth Holding calls himself a “Visionary Entrepreneur” and that’s the best way to describe himself on the journey he has been through since his devastating car accident in 2004.

On March 23, 2004 my life changed dramatically when I was faced with many life threatening injuries and two near death experiences. I survived a major head on collision and was air lifted by helicopter ambulance to a major trauma centre in Toronto, Canada. Over 10 years later, 23 surgeries, endless rehab, physically challenged in a wheelchair for eight years, fighting addiction to chronic pain opium medications, I needed to find a better way to deal with healing and controlling my pain from nerve damage.

It was on this journey that I saw my vision of a future type of technology the **Q-Wave Pulse™**. Garth Holding first developed the product from his hospital bed at Sunnybrook Hospital in Toronto in 2004. The product has been

on the drawing board for 8 years when Garth approached Bob Dickie of [Spark Innovations](#) in King City, Ontario Canada to get involved and assist him in taking his idea to the engineering, and design stage.

In 2013 Garth was awarded a US Patent, International PCT, and Trade Mark. Garth say's we are just finalizing the prototype stage with Bob at Spark Innovations and are currently working on the manufacturing of the product. The final release on the market will be sometime in late 2016.

We are currently looking for product support through crowd funding (Indiegogo). More information is available on our web site at <http://www.qwavepulse.com> . We will see what kind of support we can generate for our innovative invention that helps people heal and deal with chronic pain – a Drug Free Solution!

We are also talking to potential investors that will assist us in taking the **Q-Wave Pulse™** to the next level in Sales, Marketing, Distribution and Licensing world wide. .

For More Information on the **Q-Wave Pulse™** contact Garth Holding at [holdg@xplornet.ca](mailto:holdg@xplornet.ca).

Thank you.
